

MP-2000 MOTORIZED UNIT REGISTER CONTROLS

RETRO-FIT YOUR PRESS

- FINGER-TIP REGISTER CONTROL
- FASTER START-UP
- LESS WASTE
- BETTER OVERALL JOB QUALITY

JARDIS INDUSTRIES, INC.

THE JARDIS MP-2000 MOTORIZATION SYSTEM

The Jardis MP-2000 motorization system is a manually operated registration adjustment system that provides remote movement of lateral and circumferential print position. In addition, it allows unit-to-unit register and print-to-cut position control. The control panel is easy to understand and may be mounted directly into an existing press console, or optional control console.

Features of the Jardis MP-2000 system:

- Production waste is decreased by shortening make-ready time, and by allowing easy run time adjustment of print registration.
- Can be readily adapted to automated closed-loop feedback systems for full registration control.
- This system is easily installed on existing presses
- Individual adjustment stations for every motor on every unit.
- Illuminated indication of motor movement.
- Illuminated indication of motor limits.
- Illuminated indication of reference / center position.
- Optional multi-console control units are available.
- Multiple operators can utilize the MP-2000 system at the same time.
- All motors are provided with alternate manual override
