

56 separate handles on an 8-unit Community Press and only one right time to activate them.

with **JARDIS/EBWAY**  
**Pneumatic  
Throw-Off  
System**

you can put all  
handles on...

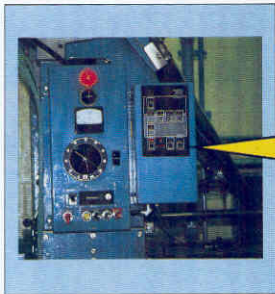

INK FEED  
INK FORM  
WATER FORM  
IMPRESSON

in the right  
order either  
automatically  
or manually

Etway PT-2134 Pneumatic Throw-Off System is able to offer features on your Goss Community Press that are expected only on late model, full featured, high priced presses. Timed sequential start-up activates the ink, water and impression handles either automatically or manually at a preset speed. You can adjust this speed, sequence and timing for your operations.

Helps Prevent Wrap Ups!

# Jardis/Ebway Sequential Pneumatic Throw-Off System

**Easy to install**

**Simple to operate**

## Save on waste...improve quality...improve safety and increase productivity

- ★ Easy to install...no holes to drill and tap
- ★ Adjustable sequential/non-sequential startup
- ★ Built-in one/two folder selectability
- ★ Printing units fitted with switches to provide full unit, half unit, no unit operation
- ★ Full manual backup on all functions
- ★ Full automatic or manual operation drive interlocked to alleviate wrap-ups on web breaks and red button stops
- ★ 24 VDC control to simplify press wiring
- ★ Conventional (non-rotary) air cylinders used throughout for reliability and freedom of maintenance
- ★ Input 120/240/460 VAC 50/60 Hertz
- ★ Electro-pneumatic approach improves response time and simplifies installation
- ★ Control Panel mounts into existing folder holes or alternately into press console
- ★ Compact design fits under op-side cover

No longer do Community pressmen have to guess and scramble to put all the handles on in proper sequence and at the exact instant this should occur. Ebway PT-2134 Pneumatic Throw-Off System takes the uncertainty out of start-ups. The precise timing of handle activation will save start-up waste, will save on start-up time and will increase press production

while improving safety and quality. Reasonably priced, Ebway Throw-Off Systems are installed in existing holes in the press frame, so installation is quick and easy. Operation is simple. One system can control up to 12 press units. This is another in the line of Ebway press controls that save web printers time and money while improving their product.
